

## **AGI/KLEARFOLD EUROPE INTRODUCES NATURESOURCE™ VISUAL PACKAGING**

AGI/Klearfold Europe brings corn-based plastic folding cartons to market

NEW YORK (April, 2006) — AGI/Klearfold introduces NatureSource™ Visual Packaging, revolutionary plastic folding cartons made from corn, a renewable domestic resource. NatureSource Visual Packaging is the first commercially viable, high-performance plastic carton made from NatureWorks® PLA (polylactide), a versatile, corn-based polymer. In addition to offering the desirable environmental benefit of being made from a sustainable, annually renewable resource, NatureSource Visual Packaging has clarity and durability that ensure consumer acceptance and powerful brand performance. NatureSource plastic cartons are suitable for any high-quality, value-added visual packaging application, including cosmetics, personal care, liquor, and many other consumer products.

“We are very delighted that AGI/Klearfold is the first to bring corn-based plastic folding cartons to market,” says Eva Traugott, Business Development Manager Visual Packaging. “With AGI/Klearfold’s 25 years of material and process development experience, and design and manufacturing expertise, this is a “natural” step forward to producing high-performance, environmental friendly packaging solutions.”

In Europe NatureSource™ Visual Packaging is also available through AGI/Klearfold Europe.
